Purpose-Built API for Consumer Applications

DIRECT API CONNECTION

Genesis NutriLive connects applications to Trustwell's nutrition engine, powering live nutrition experiences inside digital menus, product customizers, and other consumer-facing tools.

DYNAMIC INGREDIENT CHANGES

As consumers add, remove, or adjust ingredient quantities, Genesis NutriLive recalculates nutrition in real time and returns updated values fast enough to support responsive front-end experiences.

LABEL-READY DATA OUTPUTS

Genesis NutriLive returns structured data for finalized recipes and products, helping teams support label creation workflows without building a calculation engine from scratch.

TRUSTED NUTRITION INTELLIGENCE CONNECTED BY API

Genesis NutriLive brings real-time nutrition data into your digital experiences through **direct API connection**.

Built for consumer-facing applications, it enables **live recipe customization**, ingredient and **allergen statements**, and **nutrition data previews** built on Trustwell's best-in-class nutritional calculations.

For teams that need **speed, flexibility, and scale**, Genesis NutriLive offers a way to add trusted nutrition intelligence without adding unnecessary backend complexity.

LET'S TALK.
